1. Game Summary

Genre: Action Puzzleish

Library/Engine: Pahser4 Library/ Browser

Pitch:

The game is of an action puzzleish genre where players use EMW Machines to defeat monsters by using different forms of electromagnetic radiation. Each type of radiation creates unique effects with different monsters thus encouraging usage of entire spectrum.

As players progress, they travel through distinct levels, each featuring its own comic-book-inspired visual style with differing effects on their EMW machines to which they must adapt.

2. Game Concept

The player progresses through a series of levels, encountering different enemies and learning which forms of electromagnetic radiation are most effective against them. Each level has its own comic-inspired visual style which also affects the EMW machines, giving the game a fresh change regularly.

The main objective is to clear each level by using the EMW Machine effectively and adapting to the different monsters and comic styles encountered along the way.

3. Core Gameplay

The player moves through each level, encounters monsters, and uses the EMW Machine to choose and fire different types of electromagnetic radiation. Players observe how each radiation type affects different monsters and switch between them to deal with enemies effectively.

The core gameplay loop is:

1. Explore the level and locate approaching monsters.
2. Adapt to the new EMW change.
3. Attack monsters using the EMW Machine and avoid incoming attacks.
4. Progress through the level by defeating all monsters and reaching the next encounter.

Controls:

The player moves around the level using the keyboard and aims the EMW Machine using the mouse. Different keys allow the player to switch between available electromagnetic radiation types and fire the selected radiation at monsters. Movement and aiming are kept simple so that the focus remains on choosing the right radiation for each enemy.

Objective:

The objective is to defeat all monsters in each level using the appropriate electromagnetic radiation. Players progress by clearing encounters and completing levels, with later levels introducing new monsters.

4. Key Mechanics

- **EMW Selection:** Switch between different electromagnetic radiation types, each with different effects on monsters.
- **Monster Weaknesses:** Different monsters respond differently to different types of electromagnetic radiation, encouraging players to choose their attacks carefully.
- **Combat and Movement:** Move around the environment, avoid monster attacks, and position yourself to use the EMW Machine effectively.
- **Level Progression:** Clear monster encounters to progress through levels, with new enemies and challenges introduced with changing comic styles.

5. Themes

Light - The weapon uses Light (EMW) as its ammunition.

Comic - Different comic style for levels affect game play.

Twist - The ending will recontextualise the story and shed new light on everything before it.

6. Game Content

The hackathon build will contain:

- **Levels / Areas:** levels, each with a distinct comic-inspired visual style and different monster encounters.
- **Characters:** One playable character equipped with the EMW Machine.
- **Enemies / Obstacles:** Different monster types with different behaviors and weaknesses to electromagnetic radiation.
- **Weapons / Abilities:** Multiple electromagnetic radiation types, each with a different combat effect.
- **Items / Pickups:** [Health pickups / energy / temporary power-ups / None/ gun upgrades].
- **Other Content:** Basic menus, UI, sound effects, music, and level-specific visual elements.

7. Final Vision

The finished hackathon build should feel like a fast, accessible arcade-style combat game with a strong comic-book identity. Players should quickly understand the basic controls while being encouraged to experiment with different types of electromagnetic radiation to figure out how to deal with each monster. Each level should provide a slightly different visual experience and introduce enough variety to keep the combat engaging without making the game unnecessarily complex.
